Experience

January 2018 to Present

Solutionreach *Senior Software Engineer*

Solutionreach recruited me for my expertise in scalable Golang microservices to help transition the team from a Java monolith. The transition is going smoothly. I am currently responsible for the delivery of messages for the company, including the mediums of emails, sms/mms/rcs, and automated voice calls. These messages are used by healthcare providers to communicate with their patients. Overall these messages reach one in every four Americans.

June 2013 to January 2018

Mozy by Dell EMC *Quality Engineer Intern to Software Engineer*

Mozy provided me the opportunity to go from student to engineer. I started in testing, focused on web automation. Over my years there, while being mentored, I developed as an engineer and transitioned to development. As a developer, I was mainly focused on writing microservices.

Education

May 2017

Utah Valley University *B.S. Software Engineering*

Specialization: *Electrical Engineering* - Minor: *Computer Science* - GPA: 3.64

Personal Projects

Testrail Promise <https://www.npmjs.com/package/testrail-promise>

While using Testrail to track passing and failing test plans I realized there was not a packaged that easily enabled tracking of automated JavaScript asynchronous tests. I created this open source package to fill that gap. Although I no longer use Testrail, I continue to maintain the package because it is used in the Protractor testing community.

Knowledge / Languages / Tools

Currently Experience

Golang, JavaScript, Mithril JS, Most JS, Ramda JS, Google Cloud Storage, BigTable, Docker, Google Cloud Platform, OpenAPI, Git, Confluence, Jira, GitLab

Previous Experience

Redis, NodeJS, Electron, Selenium. Protractor, Ruby, Cucumber, Testrail, Testlink, Java, Angular 1, PHP, Gerrit, Redmine, MySQL, D3, JQuery, Bitbucket
